

User Guide — RAG Suite

1. Logging in to the application

Goal: The login screen allows you to select the interface language and enter your login credentials.

The screenshot shows the 'Sign In' page of the RAG Suite application. On the left is a sidebar with navigation links: Home, Dashboard, Chat, Search, Knowledge Exchange, Address Book, User Guide, and App Info. The top header includes the 'RAG Suite' logo, the 'CITRONEX' logo, a language dropdown set to 'English', and a 'Sign In' link. The main content area features a 'Sign In' heading with a welcome message: 'Welcome back! Please sign in to your account.' Below this are input fields for 'Email' (with an envelope icon) and 'Password' (with a lock icon). There is a 'Remember me' checkbox and a 'Forgot password?' link. A blue 'Sign In' button is at the bottom of the form, with a 'Sign up' link below it for users who don't have an account.

Getting started with RAG Suite

1. In the top-right corner of the screen, select the interface language from the drop-down list.
2. In the Email field, enter your email address.
3. In the Password field, enter your password.
4. (Optional) Select “Remember me” if you are using a private device.
5. Click the Log in button.
6. After a successful login, you will be redirected to the main application dashboard.

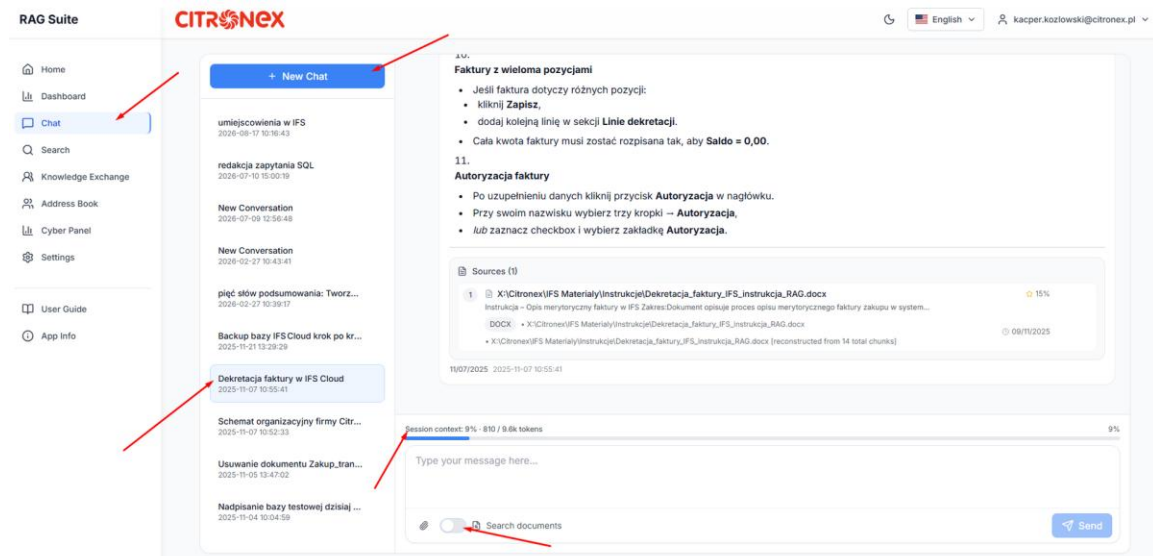

Additional options for resetting your password and registering a new account are available below the login form.

2. Using the chat function

Goal: The chat lets you interact with the language model and ask questions based on the current conversation, attached files and, optionally, the company knowledge base.

Starting a new conversation

Open Chat from the menu on the left. To start a separate topic, click the blue **+ New Chat** button. Once the conversation begins, the model analyses its context and automatically gives the chat a name that reflects the topic being discussed.

Session context

The **Session context** indicator above the message field shows how much of the available context window is currently being used by the conversation (for example, 810 / 9.6k tokens and 9%). The context contains the information provided to the model during the current session. The higher the usage, the less space remains for subsequent messages and content. When changing topics or after a very long conversation, it is worth starting a new chat to keep the context clear.

Searching company documents

Enable **Search documents** when the answer should be based on company instructions and materials. When enabled, the application uses **Elasticsearch** to search the indexed content of the company storage, selects the fragments that best match the question and provides them to the model as additional context. This allows the model to answer using the documents it finds, and the sources used may also be displayed in the response.

The screenshot displays the CITRONEX RAG Suite interface. On the left is a sidebar with navigation options: Home, Dashboard, Chat (selected), Search, Knowledge Exchange, Address Book, Cyber Panel, Settings, User Guide, and App Info. The main chat area shows a conversation with a user asking about invoice instructions. The system response provides detailed instructions on how to fill out an invoice, including a list of steps and a section on authorization. Below the response, a 'Sources (1)' section lists the document used for the answer. At the bottom of the chat input area, there is a toggle switch labeled 'Search documents' which is currently turned on, indicated by a red arrow. The interface also shows session content statistics and a 'Send' button.

Faktury z wieloma pozycjami

- Jeśli faktura dotyczy różnych pozycji:
- kliknij **Zapisz**,
- dodaj kolejną linię w sekcji **Linie dekretacji**.
- Cała kwota faktury musi zostać rozpisana tak, aby **Saldo = 0,00**.

11. Autoryzacja faktury

- Po uzupełnieniu danych kliknij przycisk **Autoryzacja** w nagłówku.
- Przy swoim nazwisku wybierz trzy kropki → **Autoryzacja**,
- **lub** zaznacz checkbox i wybierz zakładkę **Autoryzacja**.

Adding your own documents

To provide the model with your own file, click the **paperclip** icon next to the message field and select a document from your computer. The attached file can be read within the current conversation, so you can ask for a summary, an explanation, a specific piece of information or answers to questions about the document. The file content becomes part of the context of the current session.

Conversation history and deleting a chat

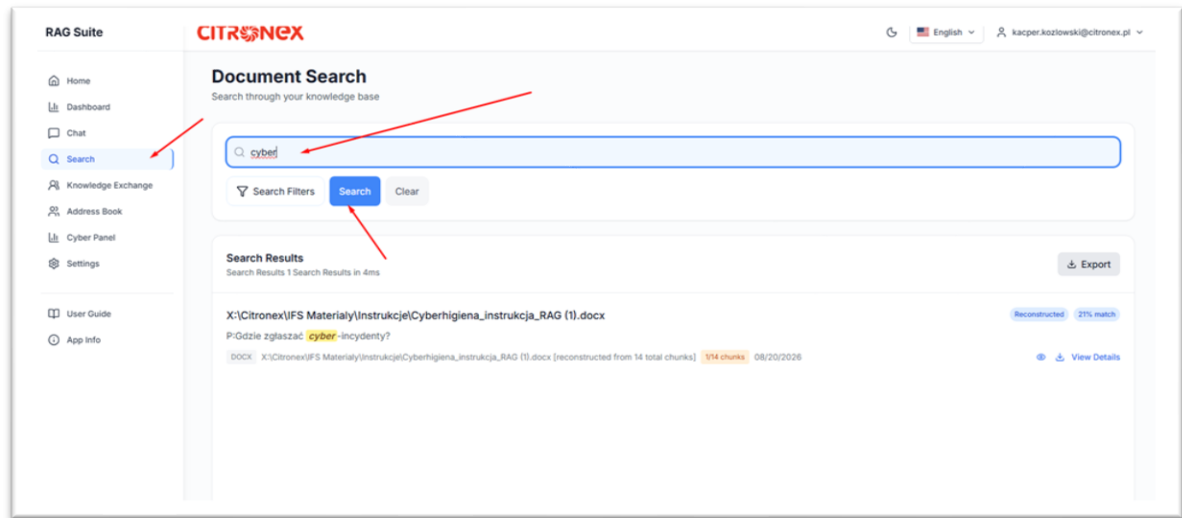

Previous conversations are shown in the list on the left. Click a chat to return to its history. To delete a conversation, hover over the relevant item in the list — a **red trash-bin icon** will appear. Click it to remove the selected conversation from the history.

Important: the language model does not use knowledge from the Internet. Answers are based on the conversation context, attached files and — when **Search documents** is enabled — the company knowledge base.

3. Search function

Goal: Quickly find company documents using a search phrase. The system searches the indexed file repository (for example, instructions, procedures and operational materials) and displays the results that best match the query.

 **Tip:** The more precise the keyword, the better the result.

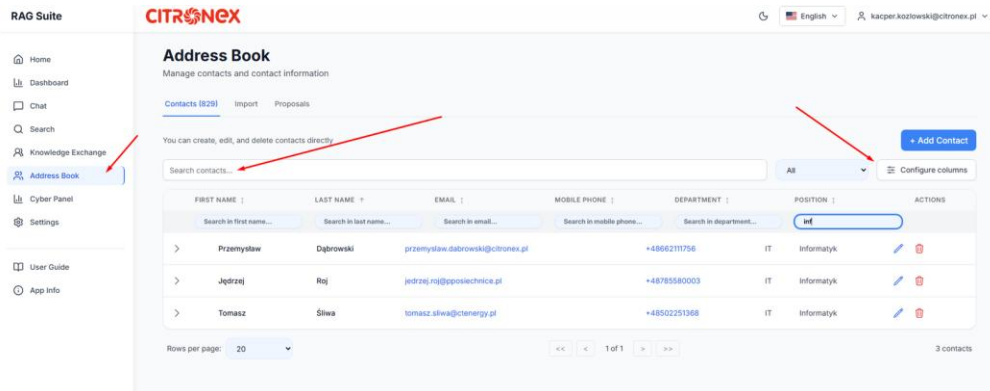

1. Enter a word or phrase — type the term you are looking for in the search field, for example:
“cyber hygiene” or “complaints procedure”
2. Click “Search” — the application will display a list of documents matching the query.
3. Review the results — each result contains a short summary and a highlighted text fragment where the searched term appears.
4. Preview a document — click the  (eye) icon to open a preview of the document without downloading it.
 Access to some documents may depend on your permissions.
5. Download or export — if the document is available, you can download it or open the full version.

Common use cases:

- Finding an instruction document — “purchase order creation instructions”
- Checking a procedure — “RMA process”
- Quickly finding a PDF — “GDPR”, “Cyber hygiene”

4. Address book

Goal: Provide quick access to company contacts — employees, departments and people responsible for key processes. The function allows you to search, view, add and edit contact entries.

How it works

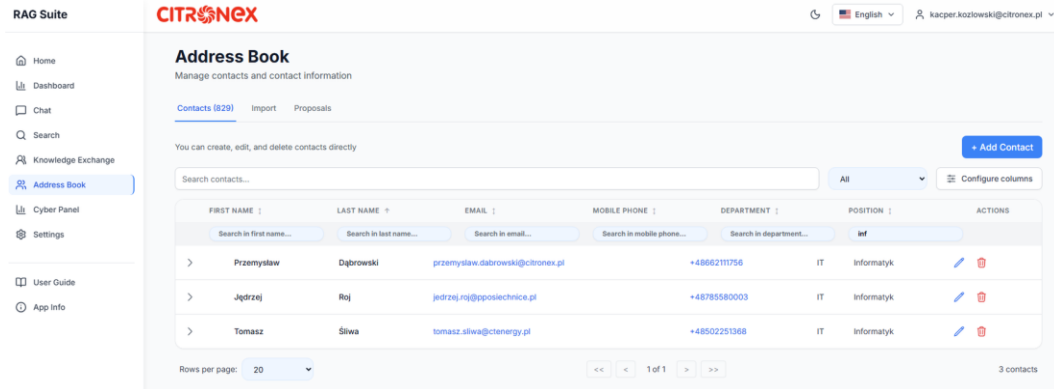

The address book contains a list of contacts with company information such as:

- first and last name,
- email address,
- phone number,
- department / location,
- job title.

You can search contacts by any field, filter the results and view detailed information.

💡 **Tip:** The search field filters contacts in real time — simply enter any part of a first name, last name or email address.

💡 **Tip:** Use the “**Configure columns**” button to manage which columns are displayed.

1. Open the **Address book** — click **Address book** in the side panel.
2. Find a contact — use the search field at the top of the list or the column filters to quickly find a person.

Examples:

- enter a first or last name,
- enter part of an email address,
- filter by department or job title.

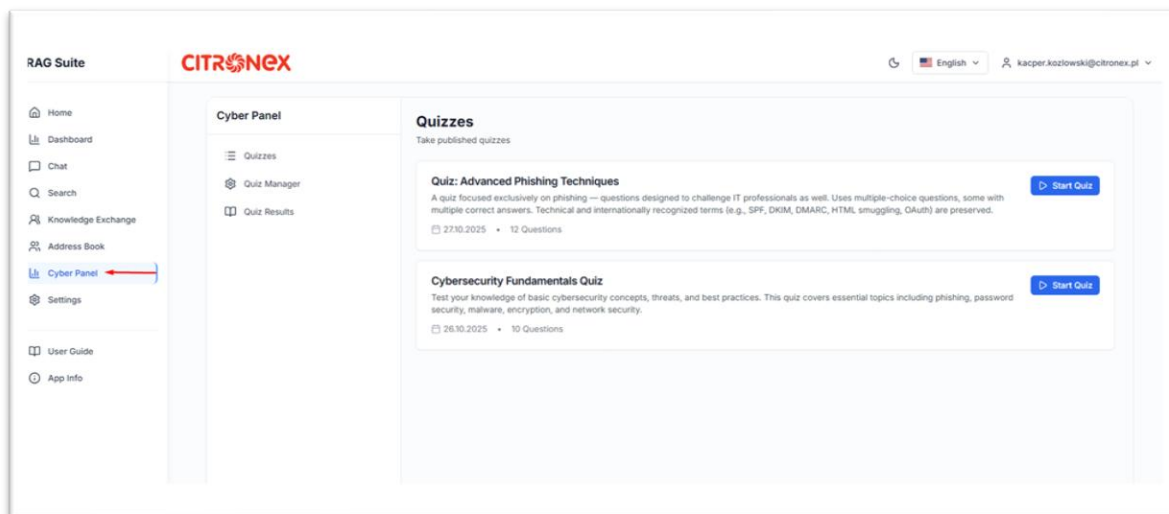

3. View contact details — click the selected row to expand additional information.

Common use cases:

- Finding a person from a specific department — Warehouse/IT/HR
- Contacting an employee — quick access to their email address or phone number
- Alphabetical sorting

5. Cyber Panel

Goal: Cyber Panel helps build cybersecurity awareness across the organisation in line with NIS2 and ISO 27001 requirements. It contains quizzes and materials prepared by the IT department to help employees reinforce good cyber-hygiene and information-security practices.

Step-by-step — how to start a quiz

1. Open **Cyber Panel** — click **Cyber Panel** in the menu on the left.
2. Open the quiz list — select the **Quizzes** tab in the section on the left (active by default).
3. Select the quiz you want to take

Each quiz includes:

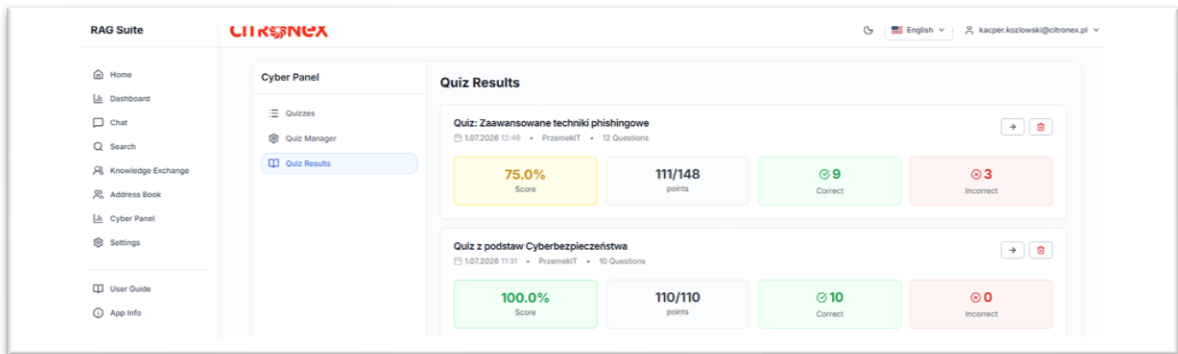

- a title,
- a short topic description,
- the publication date,
- the number of questions.

4. Click “**Start Quiz**” — press the blue **Start Quiz** button to begin the test.

💡 **Tip: Quizzes** may contain single-choice or multiple-choice questions — read the instructions shown with each question.

📘 **Important:** Regular use of **Cyber Panel** supports the organisation’s compliance with security standards and helps prepare users for potential cyber incidents.

Quiz results

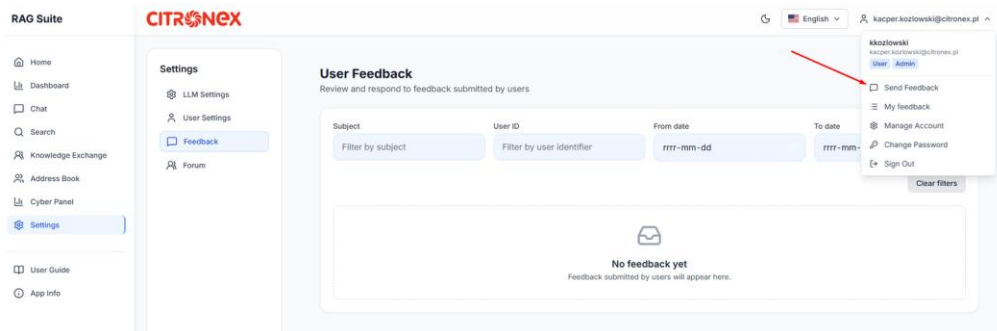

The **Quiz results** tab displays the history of completed tests and the scores achieved. You can check your knowledge level and monitor your progress.

 **Recommendation:** Repeat quizzes periodically to reinforce your knowledge.

6. User feedback

Goal: This function allows users to report feedback, suggestions and problems related to the application. Administrators can review submissions, respond to them and manage the feedback received.

 **Tip:** The more detailed the description, the faster the technical team can assess the submission.

Submitting feedback

1. Click the profile icon in the top-right corner of the screen.
2. Select **Send feedback** from the drop-down menu.
3. In the window that appears, enter:
 - **Subject** — a short description of the submission (for example, “Chat error”, “Search suggestion”).
 - **Message** — a detailed description of your feedback or suggestion.
4. (Optional) Add attachments — you can upload up to five files (maximum 5 MB each).
5. Click **Send feedback** to submit it to the team.

Reviewing my feedback

1. Click the profile icon in the top-right corner of the screen.
2. Select **My feedback**.
3. A window will open with a list of all submissions sent by the user.
Each feedback item contains:
 - the submission title,
 - the date sent,
 - the current status (for example, “Answered”),
 - the response date.
4. Click the selected feedback item to expand the details and read the team’s response.

Common use cases

- reporting technical errors,
- reporting gaps in documentation,
- suggesting new features,
- submitting interface suggestions,
- monitoring the status of your own submissions.
